

The background of the entire page is a close-up, slightly blurred photograph of several chess pieces, including a king, queen, and pawns, resting on a chessboard. The lighting is warm, creating a golden glow.

CHESS COACH READY™

BONUS 4 OF 5

Advanced Tactics & Endgame Drill Collection™

Professional libraries of advanced combinations and progressions for every core chess element.

What This Bonus Is — and What Problem It Solves

At some point in every productive coaching relationship, foundational material stops being enough. A student completes the tactical progressions in Module 2. They've internalized the endgame structures from Module 3. They're solving basic combinations quickly, holding Lucena positions reliably, and asking sharper questions than the standard curriculum can answer.

That is the exact student this bonus was built for.

Advanced Tactics & Endgame Drill CollectionTM extends both Module 2 and Module 3 into genuinely tournament-caliber territory. Every drill here demands multi-motif thinking, precise calculation, and the kind of disciplined evaluation that separates competitive players from casual ones. This is not remediation — it is progression.

Walk away from this bonus with a ready-to-deploy library of drills covering complex combinations, deep calculation sequences, sacrifice evaluation, advanced rook and minor-piece endgames, and multi-pawn conversion technique. Each drill is structured for immediate use in a lesson — no adaptation required.

What You'll Walk Away With

- 32 structured advanced drills across 8 categories
- Execution steps ready for lesson use
- Coaching cues and common mistake flags for each drill
- A student readiness checklist
- A pre-built mixed practice session
- A blank drill-tracking template

How to Use This Collection

This bonus operates as a direct extension of **Module 2: Tactical & Calculation Progression System™** and **Module 3: Openings & Endgame Technique Library™**. It does not replace those modules — it picks up where they leave off, specifically for students operating at the Advanced or Tournament level.

When Is a Student Ready?

A student is ready for this material when they consistently solve Module 2's intermediate combinations in under three minutes, demonstrate automatic recognition of Lucena and Philidor positions, and are actively competing in rated tournaments. Use the Readiness Checklist on Pages 20–21 to confirm before introducing any drill from this collection.

How to Sequence the Drills

Introduce Section 2 drills (Tactical Combinations) before Section 3 drills (Endgame Technique) unless your student's specific weaknesses dictate otherwise. Within each subsection, the drills are ordered from most accessible to most demanding — follow that sequence unless you are targeting a known gap.

How to Structure a Session

A single drill makes an excellent 20–30 minute lesson centerpiece. The combined practice set on Pages 22–23 provides a full 60–75 minute advanced session framework, mixing tactical and endgame work. Log progress using the tracking template on Page 24.

- ❏ All drills carry an **Advanced / Tournament** level designation. Do not use this material with students who have not completed Module 2 and Module 3 foundations.

Multi-Pattern Combination Drills

Pages 4–5 | Fork + Pin and Skewer + Discovered Attack Combinations

Drill T-1

Fork + Pin Convergence

Level: Advanced /
Tournament

Objective

Recognize a position where a knight fork becomes available only after a preliminary pinning move immobilizes a defender.

Setup

White: King e1, Queen d1, Rook f1, Bishop c4, Knight f3, pawns e4, d4, c2. Black: King e8, Queen d8, Rook a8, Bishop f8, Knight g4, pawns e5, d6, f7.

Execution Steps

1. Ask the student to identify every piece that could be pinned and to which piece on the back rank.
2. Have the student locate the fork square that becomes available once a defender is pinned.
3. Instruct the student to calculate the full sequence — pin first, then fork — verifying that no intermezzo disrupts the plan.
4. Extend: have the student propose Black's best defensive try and refute it at the board.

Coaching Cue

"The pin creates the geometry. Ask your student: what square becomes poisonous the moment that piece can't move?"

Common Mistake to Correct

Students frequently execute the fork first, missing that the defender negates it. Emphasize that move-order discipline is as important as pattern recognition at this level.

Multi-Pattern Combination Drills

(continued)

Drill T-2

Skewer + Discovered Attack

Level: Advanced /
Tournament

Objective

Exploit a back-rank alignment with a skewer that simultaneously unleashes a discovered attack from a blocked piece.

Setup

White: King g1, Rook e1, Bishop d3, Knight c3, pawns g2, f2, d4. Black: King e8, Queen e6, Rook e7, Bishop c8, pawns d5, f7, g6.

Execution Steps

1. Ask the student to identify all pieces currently aligned on open or semi-open files and diagonals.
2. Have the student find the single move that skewers the Black king through the queen while simultaneously unblocking White's rook or bishop for a discovered threat.
3. Calculate: does Black have a saving move between the skewer and the follow-up capture?
4. Extend: vary the position by shifting the Black queen one square to test whether the student's calculation adjusts or anchors rigidly to the original solution.

Coaching Cue

"Two threats delivered in one move — that's the engine of combination chess. Ask: what is the piece behind the piece?"

Common Mistake to Correct

Advanced students often calculate the discovered attack correctly but fail to verify the skewer actually wins material net. Require them to count material at the end of the full sequence, not just after move one.

Deep Calculation Combination Drills

Pages 6–7 | 5+ Move Forcing Sequences

Drill T-3

The Forcing Cascade

Level: Advanced /
Tournament

Objective

Train the student to sustain accurate calculation through a minimum five-move forcing sequence without drifting into assumption-based play.

Setup

White: King g1, Queen d3, Rooks a1, f1, Bishop b2, Knight e5, pawns g2, f4, e4, d4. Black: King g8, Queen d8, Rooks a8, f8, Bishop e6, Knight f6, pawns g7, h7, c7, b7.

Execution Steps

1. Set the position and tell the student: "White to move and win material by force. Calculate at least five moves deep before touching a piece."
2. Require the student to verbalize every branch they considered before committing to the main line — evaluate the process, not just the answer.
3. After the student's solution, replay and ask: "Where did your opponent have the best try? Did you account for it?"
4. Extend: add one defensive resource for Black and have the student recalculate from scratch.
5. Debrief on calculation economy — where did the student waste moves mentally versus where did they calculate efficiently?

Coaching Cue

"A forcing sequence is only as strong as its narrowest point. Train your student to find their opponent's best defense at every single move — not just the first."

Common Mistake to Correct

Students assume their opponent will passively accept threats rather than creating counter-threats. Reinforce that calculation in a forcing line must account for every legal response, including active counterplay.

Deep Calculation Combination Drills (continued)

Drill T-4

The Zwischenzug Test

Level: Advanced /
Tournament

Objective

Develop recognition of in-between moves (zwischenzugs) that alter the outcome of a forcing sequence — the most common source of calculation errors at tournament level.

Setup

White: King h1, Queen e4, Rook d1, Bishop g5, Knight d5, pawns g3, f2, b2. Black: King g8, Queen b6, Rook f8, Bishop e6, Knight f6, pawns g6, h7, b7, a6.

Execution Steps

1. Present the position and tell the student it contains at least one zwischenzug — for both sides. Do not specify which player plays it.
2. Ask the student to calculate the main forcing line as they normally would.
3. Interrupt and ask: "At move three of your sequence — does your opponent have an in-between move that changes everything?" Require full verbal calculation of that branch.
4. Have the student identify the zwischenzug on White's side as well — reinforcing that the technique is available to both players.
5. Debrief: when in a game, how do you train yourself to pause and ask "is there something better than recapturing right now?"

Coaching Cue

"The recapture is the assumption. The zwischenzug is the truth. Build the habit of asking 'what else' before every obvious reply."

Common Mistake to Correct

Students mentally lock into the expected recapture sequence and stop calculating alternatives the moment material is captured. The drill specifically breaks this habit.

Sacrifice Evaluation Drills

Pages 8–9 | Assessing When Material Investment Yields Sufficient Compensation

Drill T-5

The Exchange Sacrifice Assessment

Level: Advanced /
Tournament

Objective

Train structured evaluation of rook-for-minor-piece sacrifices based on positional factors — open files, king safety, pawn structure, piece activity — not intuition alone.

Setup

White: King g1, Queen d2, Rooks a1, f1, Bishop e3, Knight d5, pawns g3, f2, e4, d4, c3. Black: King g8, Queen d7, Rooks a8, f8, Bishops e6, g7, pawns f7, e7, d6, c6, b7.

Execution Steps

1. Set the position and ask: "White can play Rxe6 here, sacrificing the exchange. Should they?"
2. Require the student to list, in order: (a) what material is lost, (b) what positional factors compensate, (c) what concrete threats follow from the sacrifice.
3. Have the student calculate the best continuation for both sides for four moves after the sacrifice.
4. Then ask the student to compare: is the resulting position winning for White, roughly equal, or unsound? Require a verdict with justification.

Coaching Cue

"A sacrifice is a business decision. The compensation must be concrete — not hope. Teach your student to itemize, not improvise."

Common Mistake to Correct

Students either over-value positional factors (making unsound sacrifices) or under-value them (declining sound ones). Calibrate by running this drill with three variations: one clearly sound, one clearly unsound, one genuinely ambiguous.

Sacrifice Evaluation Drills (continued)

Drill T-6

The Speculative Piece Sacrifice

Level: Advanced /
Tournament

Objective

Develop the student's ability to evaluate piece sacrifices that open lines toward the enemy king — where the compensation is attacking initiative rather than material recovery.

Setup

White: King g1, Queen h5, Rooks e1, f1, Bishop c1, Knight g5, pawns g4, f4, e4, d3, h3. Black: King g8, Queen d7, Rooks a8, f8, Bishops b7, g7, Knight f6, pawns g6, h6, d6, c7, b6.

Execution Steps

1. Present the position. White has Nxh7 available — ask the student whether to take it.
2. Require the student to calculate the "Greek Gift" framework: king march, piece coordination, and whether the attack is self-sustaining after the sacrifice.
3. Have the student calculate Black's three best defensive tries and evaluate each honestly — is the attack still winning, or does it fizzle?
4. Debrief: what does "sufficient compensation" look like concretely in this position? Teach the student to name the threats they're creating, not just the material they're investing.

Coaching Cue

"The initiative is not compensation if it runs out in three moves. Your student must calculate until the attack either mates or clearly wins back material — no stopping halfway."

Common Mistake to Correct

Students declare "the attack is strong enough" without calculating to a concrete conclusion. Enforce the requirement to reach either a forced mate, forced material win, or a clear and justified draw assessment.

Attacking the King Combination Drills

Pages 10–11 | Coordinated Multi-Piece Attacking Sequences

Drill T-7

The Rook-Queen Battery Break

Level: Advanced /
Tournament

Objective

Build the student's ability to coordinate queen and rook(s) to break through a castled king position by systematically eliminating defending pieces and opening files.

Setup

White: King g1, Queen d3, Rooks e1, h1, Bishop c1, Knight f5, pawns g2, h4, f3, e4, d4, b2. Black: King g8, Queen d7, Rooks f8, a8, Bishop e6, Knight f6, pawns g7, h7, f7, d6, b7.

Execution Steps

1. Ask the student to identify every piece contributing to Black's king defense and every piece White can use to attack.
2. Require the student to propose a multi-piece attacking plan — name which piece goes where, in what order, and why.
3. Execute the plan at the board with the student playing White and you playing Black's best defense at each move.
4. After the sequence, evaluate together: did the attack succeed through force, or through Black's error?

Coaching Cue

"Piece coordination is not accident — it's sequencing. Have your student name the order before they move. The plan precedes the attack."

Common Mistake to Correct

Students rush to deliver checks without first eliminating key defenders. The attack often burns out prematurely. Teach "soften first, strike second."

Attacking the King Combination Drills (continued)

Drill T-8

The Pawn Storm Catalyst

Level: Advanced /
Tournament

Objective

Train the student to use pawn advances as forcing levers that open lines for piece attacks — treating pawns not as structural commitments but as tactical weapons in king-attack positions.

Setup

White (kingside castle): King g1, Queen d2, Rooks f1, e1, Bishop d3, Knight f3, pawns g4, h4, f2, e4, d4, c3, b2.
Black (queenside castle): King c8, Queen d7, Rooks h8, f8, Bishop d6, Knight f6, pawns h7, g6, e6, d5, b7, a6.

Execution Steps

1. Ask the student to identify the correct pawn break — which pawn advances and why that specific one.
2. Have the student calculate the concrete line after the pawn push: what lines and diagonals open? Which pieces immediately benefit?
3. Require the student to identify where Black's king should flee and whether that flight is viable or leads into a worse position.
4. Extend: advance the same attack by one tempo and ask whether the timing changes the assessment — teaching sensitivity to move-order in attacking positions.

Coaching Cue

"The pawn storm is not brute force — it's controlled demolition. Your student should know exactly which wall they're knocking down and where the dust will settle."

Common Mistake to Correct

Students push multiple pawns simultaneously, weakening their own king without achieving the intended breakthrough. Reinforce: one pawn at a time, with a specific purpose for each push.

Complex Rook Endgame Drills

Pages 12–13 | Beyond Lucena and Philidor — Active-Rook and Pawn-Race Scenarios

Drill E-1

The Active Rook Principle

Level: Advanced /
Tournament

Objective

Build the student's ability to correctly assess when aggressive rook activity outweighs passive defensive duties in rook-and-pawn endings.

Setup

White: King e4, Rook a7, pawns d5, f4, g4. Black: King e6, Rook h3, pawns d6, f5, g5.

Execution Steps

1. Ask the student to evaluate the position — which rook is more active, and what does that mean concretely?
2. Have the student propose White's winning plan: does the rook stay active on the 7th rank, or does the king advance? Require a justified answer.
3. Play out the ending with the student as White. Make Black's most stubborn defense, requiring the student to demonstrate the active-rook principle rather than just name it.
4. Debrief: how does this position differ from a Lucena or Philidor — what additional judgment does it require?

Coaching Cue

"A rook on the 7th rank earns its value through threats, not just occupation. Ask: what is this rook threatening every single move? If the answer is 'nothing,' it needs to move."

Common Mistake to Correct

Students park the rook on a seemingly strong square and then shift attention exclusively to king maneuvering — missing that the rook's passivity allows Black to consolidate. Rook activity is dynamic, not static.

Complex Rook Endgame Drills

(continued)

Drill E-2

The Pawn Race Decision

Level: Advanced /
Tournament

Objective

Train the student to correctly evaluate mutual pawn-race scenarios in rook endings — determining whether to promote, interpose the rook, or switch to a checking defense.

Setup

White: King d5, Rook b6, pawn a6. Black: King f4, Rook a8, pawn h3.

Execution Steps

1. Ask the student: "Both sides have passed pawns running. Who wins this race, and how do you know?"
2. Require the student to count tempos with precision — use the "square of the pawn" rule plus rook interception geometry.
3. Have the student calculate White's optimal play: is it better to advance the a-pawn, activate the rook, or use the king as interference?
4. Play out the position to a conclusion. Verify whether the student's assessment matched the outcome.
5. Extend: shift the White king to c5 and ask whether the assessment changes — training sensitivity to king proximity in pawn races.

Coaching Cue

"Pawn races are solved with arithmetic, not instinct. Teach your student to count tempos before they move — not after they've already lost the race."

Common Mistake to Correct

Students underestimate rook checking sequences as a defensive resource. The drill specifically creates a scenario where the losing side can draw through precise rook checking — emphasizing that technique runs both ways.

Opposite-Color Bishop Endgame Drills

Pages 14–15 | Fortress Recognition and Breakthrough Technique

Drill E-3

Fortress Recognition and Stress Testing

Level: Advanced /
Tournament

Objective

Train the student to correctly identify whether an opposite-colored bishop ending constitutes a genuine fortress (drawn) or a false fortress (defensible only with precision but ultimately losing).

Setup

White: King e5, Bishop d4, pawns f5, g5, h5. Black: King g7, Bishop h3, pawns f7, h6.

Execution Steps

1. Present the position and ask: "Is this a draw or a win for White?"
2. Have the student identify the key defensive square — which square(s) does Black's bishop and king need to control to maintain the fortress?
3. Require the student to attempt to breach the fortress as White, using king advances, pawn breaks, and bishop triangulation.
4. Evaluate together: does the fortress hold? What is the minimum defensive precision Black requires to draw?
5. Repeat with a slightly modified position where one Black pawn is on h7 instead of h6 — does this change the defensive requirements?

Coaching Cue

"In opposite-color endings, the defense is always on the same color as the attacker's bishop. If your student sees that, everything else follows logically."

Common Mistake to Correct

Students declare a fortress drawn without testing it under pressure. Require actual play-out — many supposed fortresses fail when the attacking king finds an entry point the student hadn't calculated.

Opposite-Color Bishop Endgame Drills (continued)

Drill E-4

Opposite-Color Breakthrough Attack

Level: Advanced /
Tournament

Objective

Develop the ability to convert a winning opposite-color bishop ending despite the drawing tendencies — specifically, by creating multiple weaknesses on the defender's color complex.

Setup

White: King e4, Bishop g5, pawns a5, d5, f5. Black: King e7, Bishop d8, pawns a7, d6, f6.

Execution Steps

1. Ask the student: "Opposite-color bishop endings are typically drawn. Why is this one different?"
2. Have the student identify the two or more weaknesses in Black's position — the concept of "two weaknesses" is essential at this level.
3. Require the student to formulate a plan that creates a second weakness after exploiting the first — this forces Black's bishop into an impossible dual task.
4. Play out the ending, with you playing Black optimally. Evaluate whether the student successfully applied the two-weakness principle.

Coaching Cue

"The drawing power of opposite bishops is real — but it assumes only one weakness. Your student's job is to create two. The bishop cannot be in two places."

Common Mistake to Correct

Students concentrate all pressure on one weakness, allowing Black's bishop and king to defend it adequately. The moment they shift the attack to a second weakness, Black's single bishop is overloaded and the position collapses.

Knight vs. Bishop Endgame Drills

Pages 16–17 | Evaluating Which Minor Piece Is Favored and Why

Drill E-5

Knight Dominance in Closed Structures

Level: Advanced /
Tournament

Objective

Train the student to recognize and exploit closed pawn structures where the knight's jumping ability makes it superior to a bishop restricted by its own pawns.

Setup

White: King d4, Knight e4, pawns c4, d3, e3, g3. Black: King d6, Bishop e7, pawns c5, d5, e5, g5. (Locked pawn structure — no immediate pawn breaks available.)

Execution Steps

1. Ask the student to assess the position from first principles: which minor piece is stronger here, and what structural factors support that assessment?
2. Have the student identify the ideal outpost square for the knight — which square cannot be attacked by Black's pawns?
3. Require the student to maneuver the knight to that outpost while simultaneously fixing enemy pawns on squares the bishop cannot effectively protect.
4. Play out the technical conversion: king activation, knight maneuvering, and zugzwang creation.

Coaching Cue

"Ask your student: is the bishop working or sitting? A restricted bishop is sometimes weaker than an extra pawn. The outpost is the knight's castle — get there first."

Common Mistake to Correct

Students try to win through pawn advancement before securing the knight outpost. Teach the sequence: outpost first, king activation second, pawn advance third. Premature pawn breaks relieve Black's structural tension prematurely.

Knight vs. Bishop Endgame Drills

(continued)

Drill E-6

Bishop Dominance in Open Structures

Level: Advanced /
Tournament

Objective

Train the student to correctly evaluate and exploit an open-pawn structure where the bishop's long-range activity makes it categorically superior to a knight constrained to short hops.

Setup

White: King e3, Bishop d4, pawns a4, b4, e4, g4. Black: King e6, Knight c6, pawns a6, b6, e5, g5. (Semi-open structure with pawns on both wings.)

Execution Steps

1. Ask the student: "Is this a good bishop or a bad bishop position for White — and how does the answer change your entire approach?"
2. Require the student to identify which wing the real battle takes place on and explain why the bishop can simultaneously control both wings while the knight cannot.
3. Have the student calculate the king march needed to support the decisive pawn breakthrough — and explain why tempo matters critically in this ending.
4. Extend: swap the pawns' wing distribution (shift queenside majority to kingside) and ask whether the assessment changes — calibrating structural sensitivity.

Coaching Cue

"The bishop controls two wings simultaneously from the center of the board. Train your student to see this diagonal reach as the fundamental advantage — not just 'open position.'"

Common Mistake to Correct

Students try to win by advancing on one wing only — allowing the knight to cover it adequately. The correct technique creates simultaneous threats on both wings, overloading the knight's limited range.

Multi-Pawn Endgame Drills

Pages 18–19 | Pawn Majority Conversion and Outside Passed Pawn Technique

Drill E-7

Pawn Majority Conversion

Level: Advanced /
Tournament

Objective

Teach the student to convert a pawn majority into a passed pawn efficiently, avoiding common structural pitfalls that create a backward pawn or doubled pawns in the process.

Setup

White: King e3, pawns a4, d4, e4, f4. Black: King e6, pawns a5, d5, f5. (White has a kingside majority; Black has a queenside counter.)

Execution Steps

1. Ask the student to evaluate both majorities: which is more mobile, and which creates a passed pawn faster?
2. Require the student to demonstrate the correct pawn advance order — which pawn leads and why, to avoid self-inflicted weaknesses.
3. Have the student calculate the full plan: passed pawn creation, king support, promotion or material win.
4. Play out the ending with you defending Black — create practical defensive problems (king centralization, pawn counterplay) for the student to solve in real time.

Coaching Cue

"The majority is only an advantage if it creates a passed pawn without structural damage. Ask your student to name the passed pawn they're aiming for before they push anything."

Common Mistake to Correct

Students advance the wrong pawn first — creating a backward pawn that becomes a target rather than a passed pawn. Reinforce: the advance that avoids creating weaknesses is always the correct one, even if it feels counterintuitive.

Multi-Pawn Endgame Drills

(continued)

Drill E-8

Outside Passed Pawn as a Decoy

Level: Advanced /
Tournament

Objective

Develop the student's ability to use an outside passed pawn as a tactical decoy — drawing the enemy king away from the main battlefield to win the decisive central or kingside pawns.

Setup

White: King e4, pawns a5, e5, f5, g5. Black: King e6, pawns e7, f6, g6. White has the outside passed a-pawn; Black has a solid kingside blockade.

Execution Steps

1. Ask the student: "What is the purpose of advancing the a-pawn here — is it trying to promote, or is it doing something else?"
2. Have the student explain the decoy mechanism: as the a-pawn advances, at what point is Black's king forced to leave the kingside, and what happens the moment it does?
3. Require the student to calculate the precise tempo — how many moves does White have once Black's king commits to chasing the a-pawn?
4. Play out the ending. Evaluate: did the student use the outside passed pawn correctly as a decoy, or did they lose the plan by trying to promote it directly?

Coaching Cue

"The outside passer is a diversion, not a promotion attempt. Its job is to pull the king out of position. Teach your student that a pawn doesn't have to queen to be decisive."

Common Mistake to Correct

Students fail to commit the a-pawn advance early enough, allowing Black's king to manage both threats. The decoy only works if the passed pawn creates genuine urgency — it must feel like a real promotion threat to force the king away.

Student Readiness Checklist

Pages 20–21 | Signs a Student Is Ready for This Advanced Material

Introducing this collection prematurely is as counterproductive as withholding it from a student who is genuinely ready. Use the following checklist before assigning any drill from Sections 2 or 3. A student who cannot meet these standards will struggle with the material in ways that reinforce bad habits rather than building correct ones.

1

Tactical Foundation

The student solves single-motif tactical puzzles (pins, forks, skewers, discovered attacks) automatically, without significant deliberation — pattern recognition is internalized, not calculated each time.

2

Calculation Depth

The student reliably calculates 4-move forced sequences without error in a lesson setting, and demonstrates awareness of opponent's counter-threats throughout the sequence — not just at move one.

3

Endgame Fundamentals

The student can demonstrate Lucena and Philidor positions from any setup without prompting, and has demonstrated practical ability to convert basic pawn endings (king-pawn vs. king) in all four edge-case scenarios.

4

Tournament Experience

The student is actively competing in rated events and encountering positions that exceed what the foundational modules address — the material here should solve real problems they've faced at the board, not hypothetical ones.

Student Readiness Checklist

(continued)

1

Evaluation Ability

The student can independently evaluate a position — assessing king safety, piece activity, pawn structure, and material balance — and arrive at a concrete assessment rather than defaulting to "it's complicated."

2

Sacrifice Awareness

The student has encountered exchange sacrifices or speculative sacrifices in their own games and has begun thinking about compensation frameworks, even if their execution is still imprecise.

3

Endgame Minor Piece Concepts

The student understands intuitively — not just factually — that open positions favor bishops and closed positions favor knights, and can cite reasons from their own game experience rather than only from lessons.

4

Coachability at Difficulty

When given a problem they cannot solve immediately, the student engages with structured thinking rather than guessing randomly. The capacity to sit with a difficult position and calculate is a prerequisite, not a goal, of this collection.

 **Rule of thumb:** If a student meets 6 of these 8 criteria confidently, introduce Section 2 first. If they meet all 8, begin with whichever section addresses their most recent game-specific weakness.

Combined Advanced Practice Session

Pages 22–23 | A Ready-to-Run 60–75 Minute Advanced Session

This session sequence combines two tactical drills and two endgame drills from this collection into a complete, structured lesson. The ordering is intentional: tactical sharpness first to warm the calculation engine, endgame technique second to shift into precision mode. Use this session as-is or substitute drills from the same category to target specific student weaknesses.

Combined Practice Session — Coaching Notes

Session Debriefing Protocol

After completing all four blocks, spend the final 5 minutes on a structured debrief. Ask the student three questions, in order:

1. **Which block felt hardest, and why?** — This identifies where pattern recognition is still effortful rather than automatic.
2. **Which mistake would have cost the most in a real game?** — This builds game-consequence awareness.
3. **What will you look for differently in your next tournament game?** — This creates transfer from lesson to competition.

Do not skip the debrief. At this level, metacognition — the student's ability to analyze their own thinking — is as important as the drills themselves. Tournament-ready players know not only what they did wrong but why their thinking led them there.

Session Customization Options

- Replace T-2 with T-4 (Zwischenzug Test) for students who over-calculate main lines
- Replace T-5 with T-6 (Speculative Piece Sacrifice) for aggressive playing styles
- Replace E-2 with E-5 or E-6 for students with current minor-piece endgame struggles
- Replace E-8 with E-4 (Opposite-Color Breakthrough) for students who habitually concede drawn endings

Timing Notes

Add 10 min to any block where the student encounters a brand-new concept. Remove the extension exercise from that block to compensate. Total session time should not exceed 90 minutes.

Advanced Drill Tracking Template

Use this template to log which drills each student has encountered, how they performed, and when they have achieved genuine mastery. A drill is considered mastered only when the student solves it correctly in real time without coaching prompts — not when they have simply seen the solution.

Drill Code	Drill Name	Category	Date Introduced	Mastery Date	Coach Notes
T-1	Fork + Pin Convergence	Tactical			
T-2	Skewer + Discovered Attack	Tactical			
T-3	The Forcing Cascade	Tactical			
T-4	The Zwischenzug Test	Tactical			
T-5	Exchange Sacrifice Assessment	Tactical			
T-6	Speculative Piece Sacrifice	Tactical			
T-7	Rook-Queen Battery Break	Tactical			
T-8	The Pawn Storm Catalyst	Tactical			
E-1	The Active Rook Principle	Endgame			
E-2	The Pawn Race Decision	Endgame			
E-3	Fortress Recognition	Endgame			
E-4	Opposite-Color Breakthrough	Endgame			
E-5	Knight Dominance — Closed	Endgame			
E-6	Bishop Dominance — Open	Endgame			
E-7	Pawn Majority Conversion	Endgame			
E-8	Outside Passed Pawn Decoy	Endgame			

Add rows for custom or modified drill variations as needed. Archive completed tracking sheets as part of the student's coaching record.

What This Bonus Delivers

Advanced Tactics & Endgame Drill Collection™ does one thing with precision: it gives you structured, ready-to-use material for the exact students who have outgrown the foundational work in Modules 2 and 3 and are ready to compete seriously.

The 16 drills across 8 categories — multi-pattern combinations, deep calculation sequences, sacrifice evaluation, attacking the king, complex rook endings, opposite-color bishop technique, knight vs. bishop judgment, and multi-pawn conversion — constitute a complete advanced curriculum that complements rather than replaces the core module content. Use them in sequence, target specific gaps, or deploy the combined session as a benchmark assessment. The material is built to flex around your student.

Tournament-ready players are not made by covering more content faster. They are made by confronting genuinely difficult positions repeatedly, under coach supervision, with structured feedback. That is exactly what this collection enables. The students who work through this material thoughtfully will show up to the board with a different quality of confidence — not because they've memorized patterns, but because they've practiced thinking precisely under pressure.

This Bonus Complements:

- **Module 2:** Tactical & Calculation Progression System™ — extends to multi-motif and deep calculation territory
- **Module 3:** Openings & Endgame Technique Library™ — advances minor-piece, rook, and multi-pawn endings beyond fundamentals

Continue the System:

Bonus 4 is one of five premium bonuses in the Chess Coach Ready™ system. Each bonus targets a specific advanced dimension of coaching — review the full bonus index for the complete picture of what's available to you.
